Academic Program and Course Description Guide

Introduction:

The educational program is a well-planned set of courses that include procedures and experiences arranged in the form of an academic syllabus. Its main goal is to improve and build graduates' skills so they are ready for the job market. The program is reviewed and evaluated every year through internal or external audit procedures and programs like the External Examiner Program.

The academic program description is a short summary of the main features of the program and its courses. It shows what skills students are working to develop based on the program's goals. This description is very important because it is the main part of getting the program accredited, and it is written by the teaching staff together under the supervision of scientific committees in the scientific departments.

This guide, in its second version, includes a description of the academic program after updating the subjects and paragraphs of the previous guide in light of the updates and developments of the educational system in Iraq, which included the description of the academic program in its traditional form (annual, quarterly), as well as the adoption of the academic program description circulated according to the letter of the Department of Studies T 3/2906 on 3/5/2023 regarding the programs that adopt the Bologna Process as the basis for their work.

Concepts and terminology:

Academic Program Description: The academic program description provides a brief summary of its vision, mission and objectives, including an accurate description of the targeted learning outcomes according to specific learning strategies.

<u>Course Description:</u> Provides a brief summary of the most important characteristics of the course and the learning outcomes expected of the students to achieve, proving whether they have made the most of the available learning opportunities. It is derived from the program description.

<u>Program Vision:</u> An ambitious picture for the future of the academic program to be sophisticated, inspiring, stimulating, realistic and applicable.

<u>Program Mission:</u> Briefly outlines the objectives and activities necessary to achieve them and defines the program's development paths and directions.

<u>Program Objectives:</u> They are statements that describe what the academic program intends to achieve within a specific period of time and are measurable and observable.

<u>Curriculum Structure</u>: All courses / subjects included in the academic program according to the approved learning system (quarterly, annual, Bologna Process) whether it is a requirement (ministry, university, college and scientific department) with the number of credit hours.

<u>Learning Outcomes:</u> A compatible set of knowledge, skills and values acquired by students after the successful completion of the academic program and must determine the learning outcomes of each course in a way that achieves the objectives of the program.

<u>Teaching and learning strategies</u>: They are the strategies used by the faculty members to develop students' teaching and learning, and they are plans that are followed to reach the learning goals. They describe all classroom and extracurricular activities to achieve the learning outcomes of the program.

1. Program Vision

The vision is for the department to be a distinguished educational place in its administrative programs, training curricula, and scientific research, and it seeks to achieve a prominent position among the corresponding departments of the Central Technical University and the Iraqi technical universities by providing and updating distinguished, modern programs that focus on the requirements of the labor market and the development taking place in administrative work and information.

2. Program Mission

The department should be distinguished in keeping pace with the rapid and modern developments in the field of management and its applications in the curricula (theoretical and practical) and linking them with the labor market and the needs of society by supporting and developing the quality of teaching and training using the latest internationally approved methods, as well as providing appropriate human resources and the necessary infrastructure, thus providing the country with administrative cadres. Qualified and competent.

3. Program Objectives

- Graduating human resources who have comprehensive knowledge of the basics of materials management and the application of modern storage systems.
- Follow an academic system that includes continuous re-evaluation of plans and curricula.
- Establishing partnership relationships with employers within the public and private sectors.
- Serving the Iraqi community through targeted professional training programs.

 Adopting professional ethics as a basis for implementing all activities and work.

4. Program Accreditation

Its paragraphs are currently in the process of being worked on.

5. Other external influences

Ministry of Higher Education and Scientific Research.

8. Expected learning outcomes of	the program
Knowledge	
Introducing the student and informing him of all	Understanding the steps of storage, its basics,
the activities related to the storage process,	and ways to maintain it, as well as planning,
which are:	measuring, and organizing accounting records in
- Inventory planning and control	this regard
 Managing production operations 	
 Marketing and distributing products 	

- Performing calculations on stored quantities	
and measuring them	
Skills	
How to use modern storage systems.	Use modern control methods for operations
Applying the adoption of modern production	how to use the computer in the pricing and
systems	warehousing process
Ethics	
Follow ethical behavior at work	A deep understanding and understanding of
	professional ethics
Use inventory control methods to prevent waste	Understanding how modern technologies work,
	such as robots in warehousing
Maintaining inventory in the organization	Comprehensive knowledge of risk and insurance
- Applying occupational safety procedures in the	management in organizations and applying its
storage process	requirements to preserve capital

9. Teaching and Learning Strategies

- Providing the student with the basics and additional topics related to educational outcomes
- Solving some practical examples by the teaching staff
- Solving some practical examples by the student
- Use (Data Show) to display various topics using the electronic computer in the application

10. Evaluation methods

- Daily exams and discussion within the lecture
- Monthly exams and homework

11. Faculty

Faculty Members

Academic Rank	Specialization		Special Requireme (if applica	•	Number of the teaching staff

Professional Development

Mentoring new faculty members

Introducing new faculty members to the university's vision, mission, organizational structure, policies and procedures.

Enabling new faculty members to gain a better understanding of their rights and obligations.

Providing new faculty members with detailed information about university facilities and services.

Professional development of faculty members

Participating in specialized scientific courses, workshops, and seminars, viewing lectures published on electronic platforms, and preparing scientific lectures.

12. Acceptance Criterion

Central admission/sons of martyrs/parallel/re-nomination

13. The most important sources of information about the program

Sources of information from the Ministry of Higher Education and Scientific Research.

Central Technical University website

Electronic sources.

14. Program Development Plan

- 1- Using educational techniques by applying comprehensive quality management in education and relying on the academic accreditation of the Association of Arab Universities.
- 2- Activating educational platforms that keep pace with technological development.
- 3- Linking the educational institution to the surrounding environment, qualifying its graduates according to the requirements of the internal and external labor market, and giving these graduates the ability to plan and implement small projects.

8. Course Objectives

Course Objectives

- Providing real-life information and experiences about correspondence skills removing imaginary barriers to prevent obstacles that hinder administrative commercial correspondence processes.
- In business, written communication is an important means of passing information. This type of written communication used for business purposes is called business correspondence. Correspondence can occur in business communications within an organization, between different organizations, or between a customer and an organization. importance of business correspondence lies in the fact that it is the formal method of exchanging information through which professional relationships are maintained between organizations, employees and customers. Since it is in written form, it can serve as a future reference for the information being communicated.
